

ENERGY EFFICIENCY AUDITS

FOR DATA DRIVEN
DECISION MAKING

In today's rapidly evolving landscape of sustainability and resource management, energy efficiency stands as a pivotal cornerstone for organizations aiming to minimize their environmental footprint while optimizing operational costs. At the heart of this endeavor lies the strategic utilization of energy audits which harness the power of data analytics to scrutinize patterns, pinpoint inefficiencies, and offer invaluable insights into where and how energy can be best conserved.

Conducted by our team of professional mechanical engineers, 8760 offers the choice of **4 different audit services** that will deliver insights to help with your data driven decision making.

BENCHMARKING STUDY: If you own or manage several buildings, this service will provide insights into the energy performance of each property, at a reasonable price. This helps identify trouble spots and focus improvement efforts on high priority areas.

DESKTOP AUDIT: This cost effective service uses historical data to provide initial efficiency insight, typically for a single building. Valuable for determining if further, deeper analysis is needed on specific buildings along with estimated savings from implementing energy efficiency measures.

FULL ENERGY AUDIT: This onsite service does a deep dive into all building systems, equipment, building envelopes, and more to provide a comprehensive, detailed solutions report outlining energy efficiency improvement opportunities.

CONTINUOUS ENERGY REPORTING: Ongoing, customized efficiency reporting will help building operators monitor energy performance over the long-term and help drive further decisions for improvements.
